Dear Sir or Madam,

I would like to submit my application for the position of Devops Engineer in your company. I currently work for Maersk as a Software Automation Engineer. I currently help my team to set-up automated build and deployment pipelines to both cloud and on-premise infrastructure, mainly with Ansible as the go-to framework. I have worked with devops tools like Jenkins, Azure Devops, Bitbucket, Sonarqube, Nexus etc. At Maersk, I have been fortunate to partake in various life-cycles of setting up a CI/CD automated pipeline for project teams in a truly global company. I have helped setup pipelines from scratch and also consistently provided support and improvements to existing pipelines.

It is my firm conviction that I am qualified and well suited for the role in your company. I have an underlying interest in how devops tools can be leveraged to automate and improve technical and business processes.

Before Maersk, I worked for a small startup in Copenhagen called Advokurser.dk as a Junior Software/Web developer. At the time, I worked with teammates to build and maintain e-learning web applications for lawyers and accountants in Denmark. The technological stack consisted mainly of Ruby on Rails, Html, CSS, Liquid templates and Javascript.

It is my sincere hope that you will reach out to me to further discuss my qualifications and motivations for this role.

Sincerely,

Hakeem Baba.
